Vote YES on Measure Z to protect Woodland's environment, secure our water resources, and help stabilize utility bills—without expanding City limits!

In 2006, Woodland voters voted to establish an Urban Limit Line to protect open-space and local agriculture from sprawl and overdevelopment. Measure Z would maintain the Urban Limit Line's key protections while providing a common-sense, environmentally sound update to allow for the limited delivery of City water and wastewater services just outside the line, resulting in major benefits to local families.

$2 Million in Direct Community Benefits: Measure Z would allow private investment to fund the expansion of Woodland's recycled water system to serve our parks, schools, and the cemetery, offsetting potable water use and reducing the likelihood that water restrictions are ever imposed on existing residents.

Protecting Our Shared Aquifer: Measure Z protects the critical groundwater resources that residents and family farmers rely on by reducing the need for several large businesses to pump groundwater from local aquifers.

Discouraging Septic Systems: Old septic systems pose a constant risk to our local water quality. Measure Z would allow neighboring properties to connect to the City's modern wastewater system, eliminating septic systems that could contaminate groundwater and harm our environment.

Potential for Rate Stabilization: Under Measure Z, new corporate water and wastewater customers would pay for 100% of their infrastructure and utility costs, expanding Woodland's service base and helping share the fixed operating costs of our utility systems. As a result, Measure Z could stabilize water and wastewater fees for all current Woodland ratepayers.

Prevents Sprawl and Overdevelopment: Measure Z maintains the key Urban Limit Line protections that strictly prohibit new residential development, protecting our agricultural heritage and preventing urban sprawl.

Join Woodland families, environmental advocates, and local farmers in voting YES on Measure Z!
